Sanitary Ware

New Collection

Good design joins functionality and pretty shapes. Not everything pretty functions well. And not everything functional is pretty.

In today's world of hyper functionality, designers are more and more frequently faced with the need to distinguish themselves by exceptional shapes and designs. Emotion and character are new components of design. This can be seen in our modern-day bathrooms. This is why all "almanit" products give priority to design and emotion.

Ceramic is a product composed from natural raw materials. Kaolin, clay, feldspar and silica sand are ground and mixed with water to form a paste. After straining and a series of very exacting quality tests, this mass is cast in plaster or plastic moulds. After some 2 hours, the cast piece can be removed from the mould and further processed by hand. The pieces are pre-dried and are then forwarded to the drying unit.

This desiccation process compact sand hardens the ceramic body so strongly that the sanitary unit is already tough enough to handle as it goes to the next stage, the glazing process.

The glazing process lends the rough piece a smooth finish which, in the furnace at 1210°C, melts out as a glassy surface, giving the sanitary unit the desired colour and, of course, it's hygienic surface. The glaze is a watery solution of kaolin, frit, pigments and mineral powders. The units then undergo a strict quality check to ensure they comply with the specified ceramics and technical parameters.

Our up-to-date production techniques allows us to offer our ceramic sanitary ware with **Anti-Bacterial** system which prevents the propagation of bacteria by using the silver ion technology. This system does not allow the bacteria to survive on the surface of the ceramic which assures a hygienic environment in the bathroom. Another system is the **Easy Cleaning** system which does not allow water drops and stains to remain on the surface of the ceramic sanitary ware, this assures easy cleaning in a short time.

PRESENT EXTREMELY SIMPLE STYLE BATHROOM

The design of the modern bathroom, has changed the stereotyped close way of the past, mostly setting up the window, some or even big French window, let you enjoy naturally under the state of leisure, enjoy the serenity atmosphere. And, such open design not only ventilation and breathe freely, but also benefit the air and flow, sterilization, preventing disease and keep the room healthy.

Sanitary Ware

Venus Series

Idea: Soft Close Seat Cover

Innovation: Easy Cleaning

Venus Series

Modern sanitary should be a mixture of space and culture, so a profound understanding of modern sanitary is necessary for sanitary design. A harmonious restroom can provide the user a natural and pleasant feeling and quite unique experience.

We prefer characteristic designs to simple ones in modern times. The appearance, more or less, simple or complicated, new or old, enriches the designs, and it comes up to common demands. Through different contents and forms, affections are introduced into designs to wash the function of material, and get on well with life.
